## Website analyses and proposed improvements

The official Tablets and More website (for Malta) serves as both an online store as well as a catalogue for the local electronics shop of the same name.

<https://www.tabletsandmoreelectronics.com/>

The home page for the website consists of a large background image that fades out to load a new image, these images

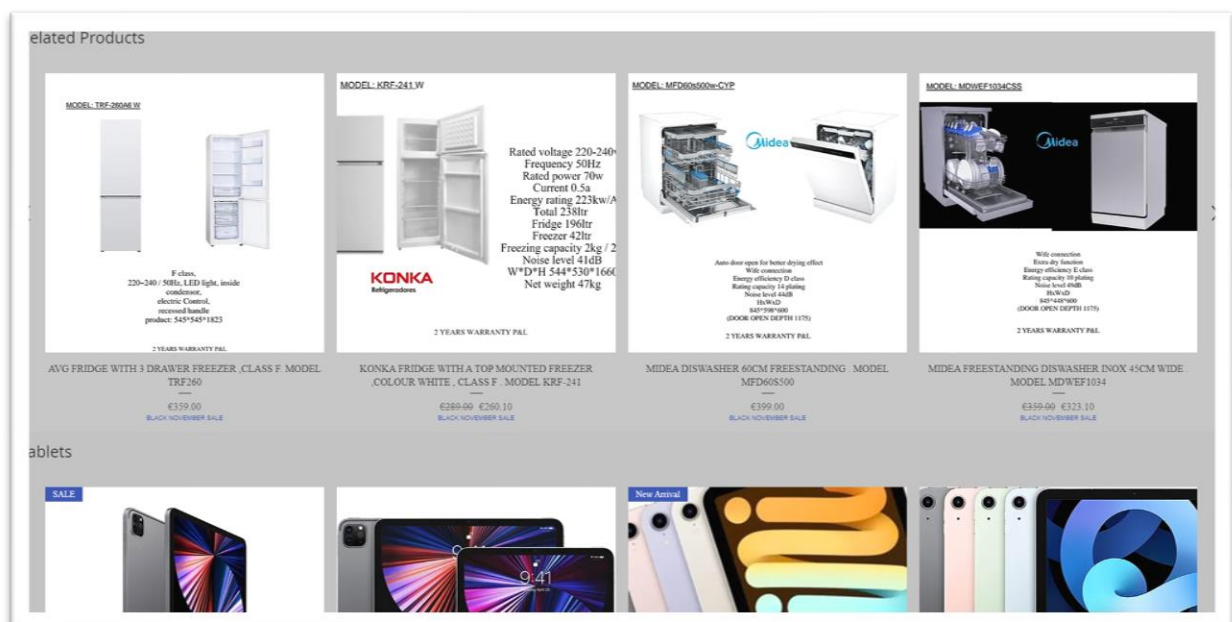

consist of products that Tablets and More sells. Sometimes, this changes to an advertisement video made by Danusan.

In my opinion, the website's header is its biggest fault.

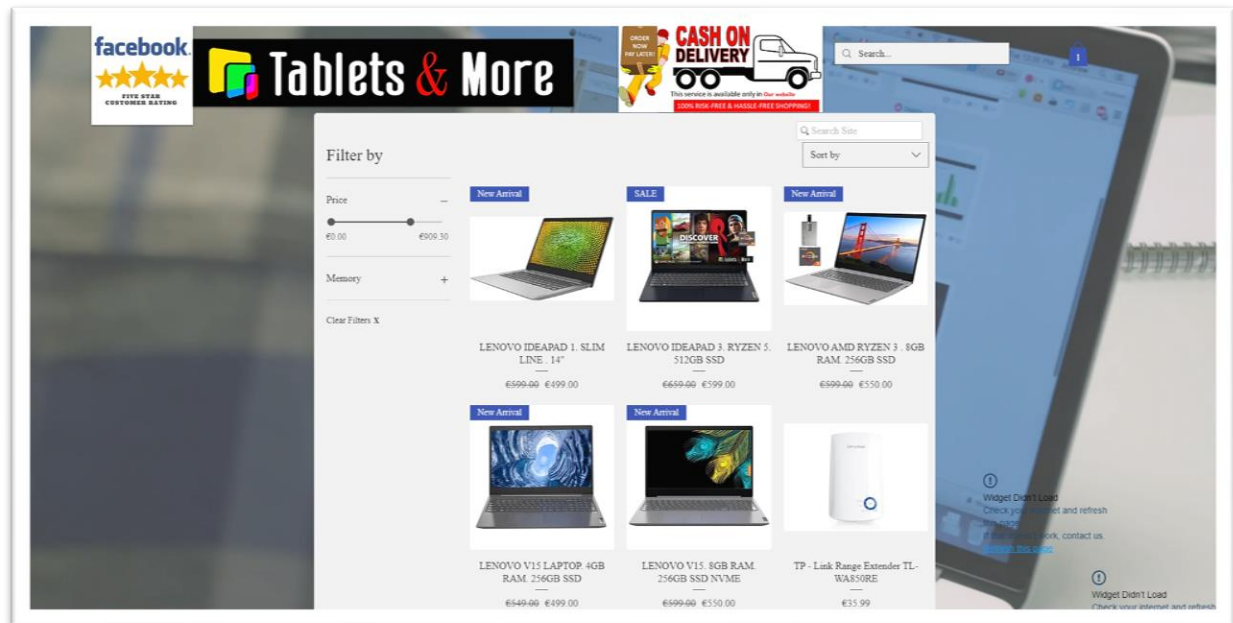

It's colour scheme is dull, uninspired and doesn't match industry standards nor its logo's colour scheme.

Moreover, the images in the banner don't have good composition and there is no smooth transition between the background color and the image. This makes them look out of place.

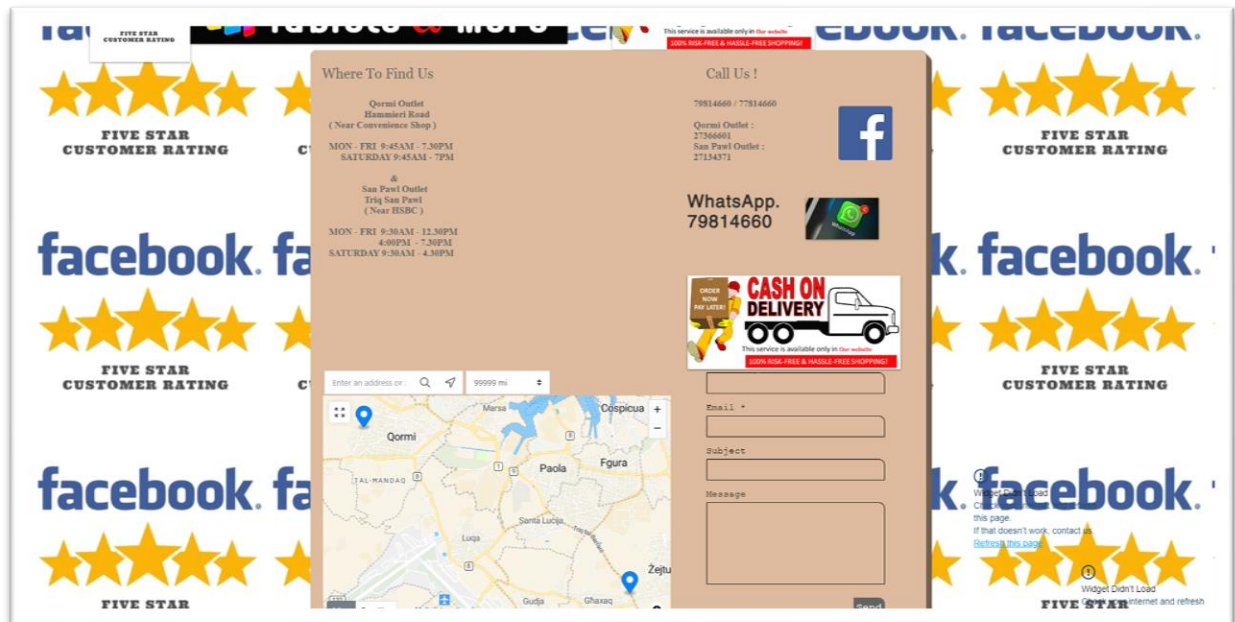

The website also features popular products further down the homepage. Again, these look unappealing and unprofessional for the reasons mentioned previously.

I plan to omit this part of the homepage entirely and rely solely on a header with links to other pages to browse, as it is more organised that way.

As soon as you click on one of the headers, you are redirected to a product section page, here you can browse all the available products in a given section (e.g tablets, phones, etc). In these pages one can browse items based on their desired price range using a slider to the left. There is also a video playing in the background.

I plan to redesign this by having the background video blurred slightly and also adding circular mask with a thick white edge and feathering around the video. Moreover, I plan to move the “cash on delivery” banner to the bottom of the page where the white colour scheme of it will blend with the white background of the page.

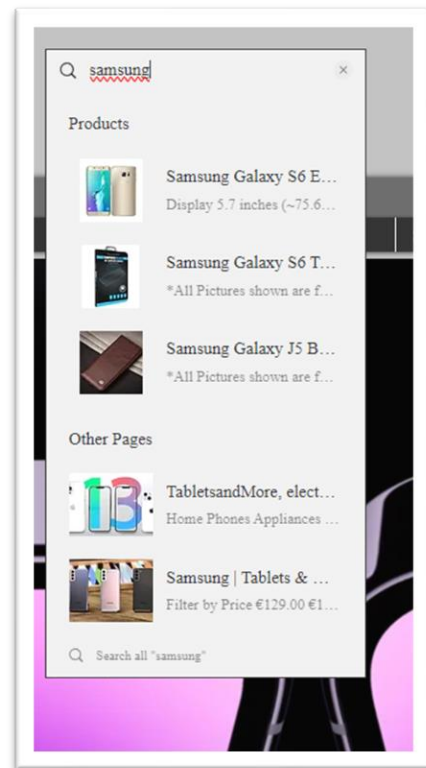

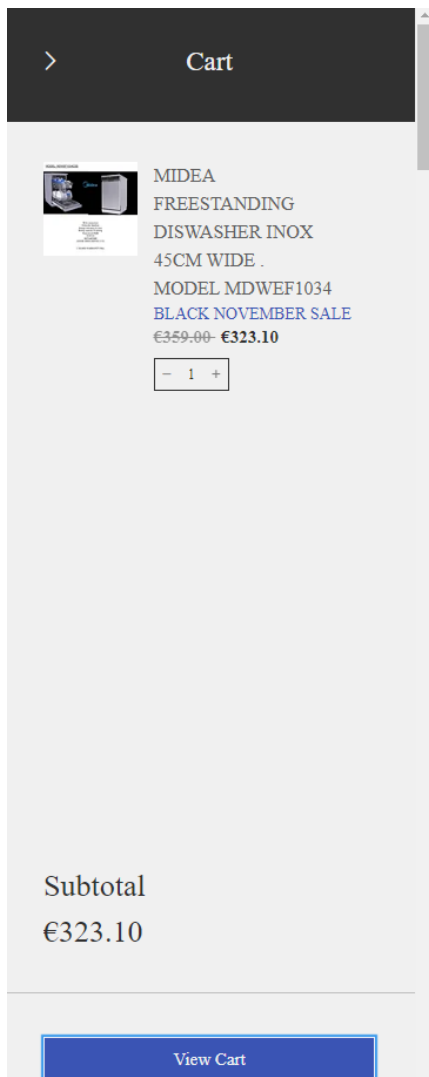

Moreover, there exists a contact page with the purpose of informing the user where to communicate with this business, as well as information regarding their location using a google maps window as well as opening times. Lastly, one can write an email directly from here.

Apart from the colour scheme of this page being out of place, the background looks very stretched and repetitive, I plan to replace it with several images of the various store locations that cross fade with one another resembling “a slide show”, in addition to masking and feathering for more aesthetic appeal.

Furthermore, there exists a search option with a drop down menu which can be accessed at any page in the website. This displays items related to the user's search for the purpose of easily finding a specific product or group of products related to the searched name.

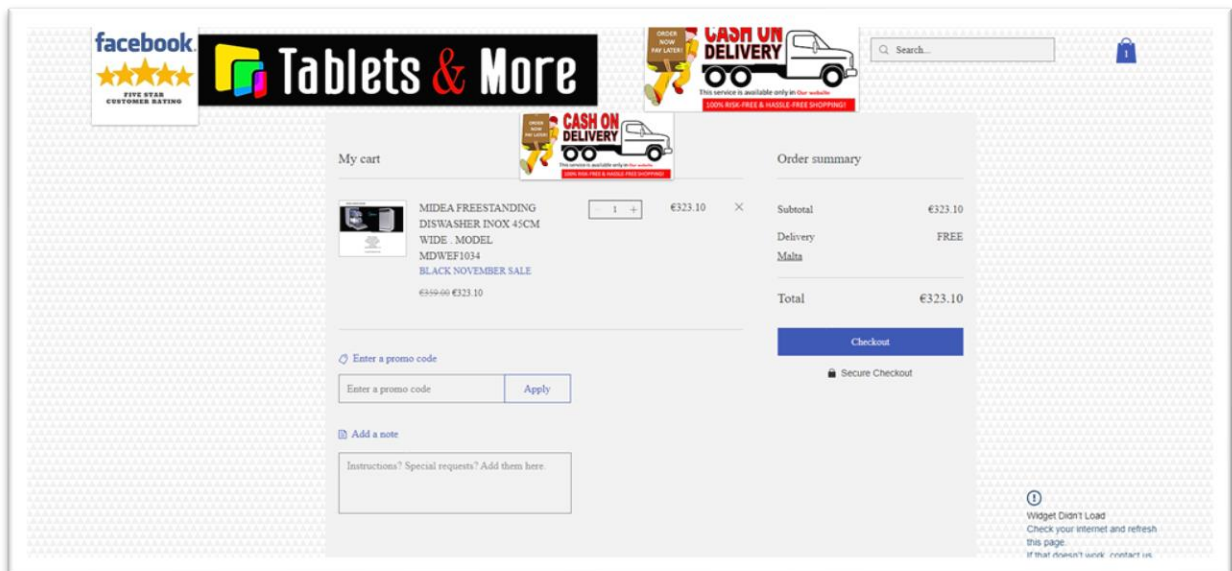

This part is already aesthetically pleasing and functional for the most part. one minor improvement I plan to make would adding a circular mask with a feathering around the product images to make it look less jagged.

Lastly, there exists a cart drop down menu at every page for the purpose of viewing the number of items one has added to their cart as well as listing their prices and calculating the total price for all added items.

When the user selects “view cart” this redirects them to another page with similar information, but with additional information such as being able to enter promo codes and viewing the delivery price.

For some reason, the cash on delivery banner is duplicated which looks very unprofessional, I plan to omit one of them.

 Secure Checkout

When the user presses the blue “checkout” button, this redirects them to a checkout page where the user can input his personal information in order to execute the buying and shipping process.

# Sitemap

Note1: All pages can lead back to the view cart page

Note2: I've added two sub pages at the "shop page" that will be activated by buttons for a better product browsing experience.

## User Personas

**Name:** Maria Zammit

**Gender:** Female

**Age:** 38

**Mother of** 2

**“It was always frustrating for me to find the latest gadget my children wanted.”**

**Motivations:**

Maria is a mother of two tech-savvy young children but unfortunately is a bit out of touch with the latest technological trends that her young children are interested in. She often can't distinguish the latest tablet from an old one and has trouble navigating other websites for the latest models.

**Goals:**

- Easily find the latest tech products for her children.
- Would like a detailed description of the product so that her children confirm that they like it.

**Frustrations:**

- Other websites not sorting new products from older ones.
- Very vague descriptions of products in other websites.

**Name:** Francesca Micallef

**Gender:** Female

**Age:** 26

**Bolt Delivery Manager**

**“I want a quick, easy and efficient way to provide my ever increasing employees with their necessary tech for their deliveries”**

**Motivations:**

Francesca is a manager of the famous Bolt Food delivery service in Malta. She wants a reliable, quick and efficient way to provide her ever increasing delivery couriers with the tech they need to facilitate their delivery services. Including cheap smartphones

**Goals:**

- Easily find the latest deals on good quality smartphones for her employees.
- An efficient and easy to use the delivery service, as she is very busy.

**Frustrations:**

- Having to scroll down a long shopping page to find deals.
- Hard to navigate delivery pages, thus wasting her precious time as a manager

**Name:** Abdul Mohammed

**Gender:** Male

**Age:** 27

**Construction Engineer**

**“I want a quick and efficient way to order vast quantities of ACs for my soon to be completed office building”**

**Motivations:**

Abdul is a construction engineer whose overseeing the final stages of construction for his large office complex project and wants to execute the final stages of installing HVAC systems.

**Goals:**

- Order large amounts of AC units
- Read detailed technical information about AC units

**Frustrations:**

- Having to add each and every number of the same product to cart.
- Not enough detailed technical information about said Product, only vague description on shopping pages.

# Input, Process, Output Charts (IPO)

Table 1:Home Page IPO Chart

Input	Process	Output
Hover over page button	Turn red button yellow	Yellow page button
Move cursor away from page button	Yellow button turns red again	Red page button
